

AristoPay System Architecture & Workflow Diagrams

This document visualizes the system architecture, component relationships, and user transaction lifecycles for the AristoPay platform.

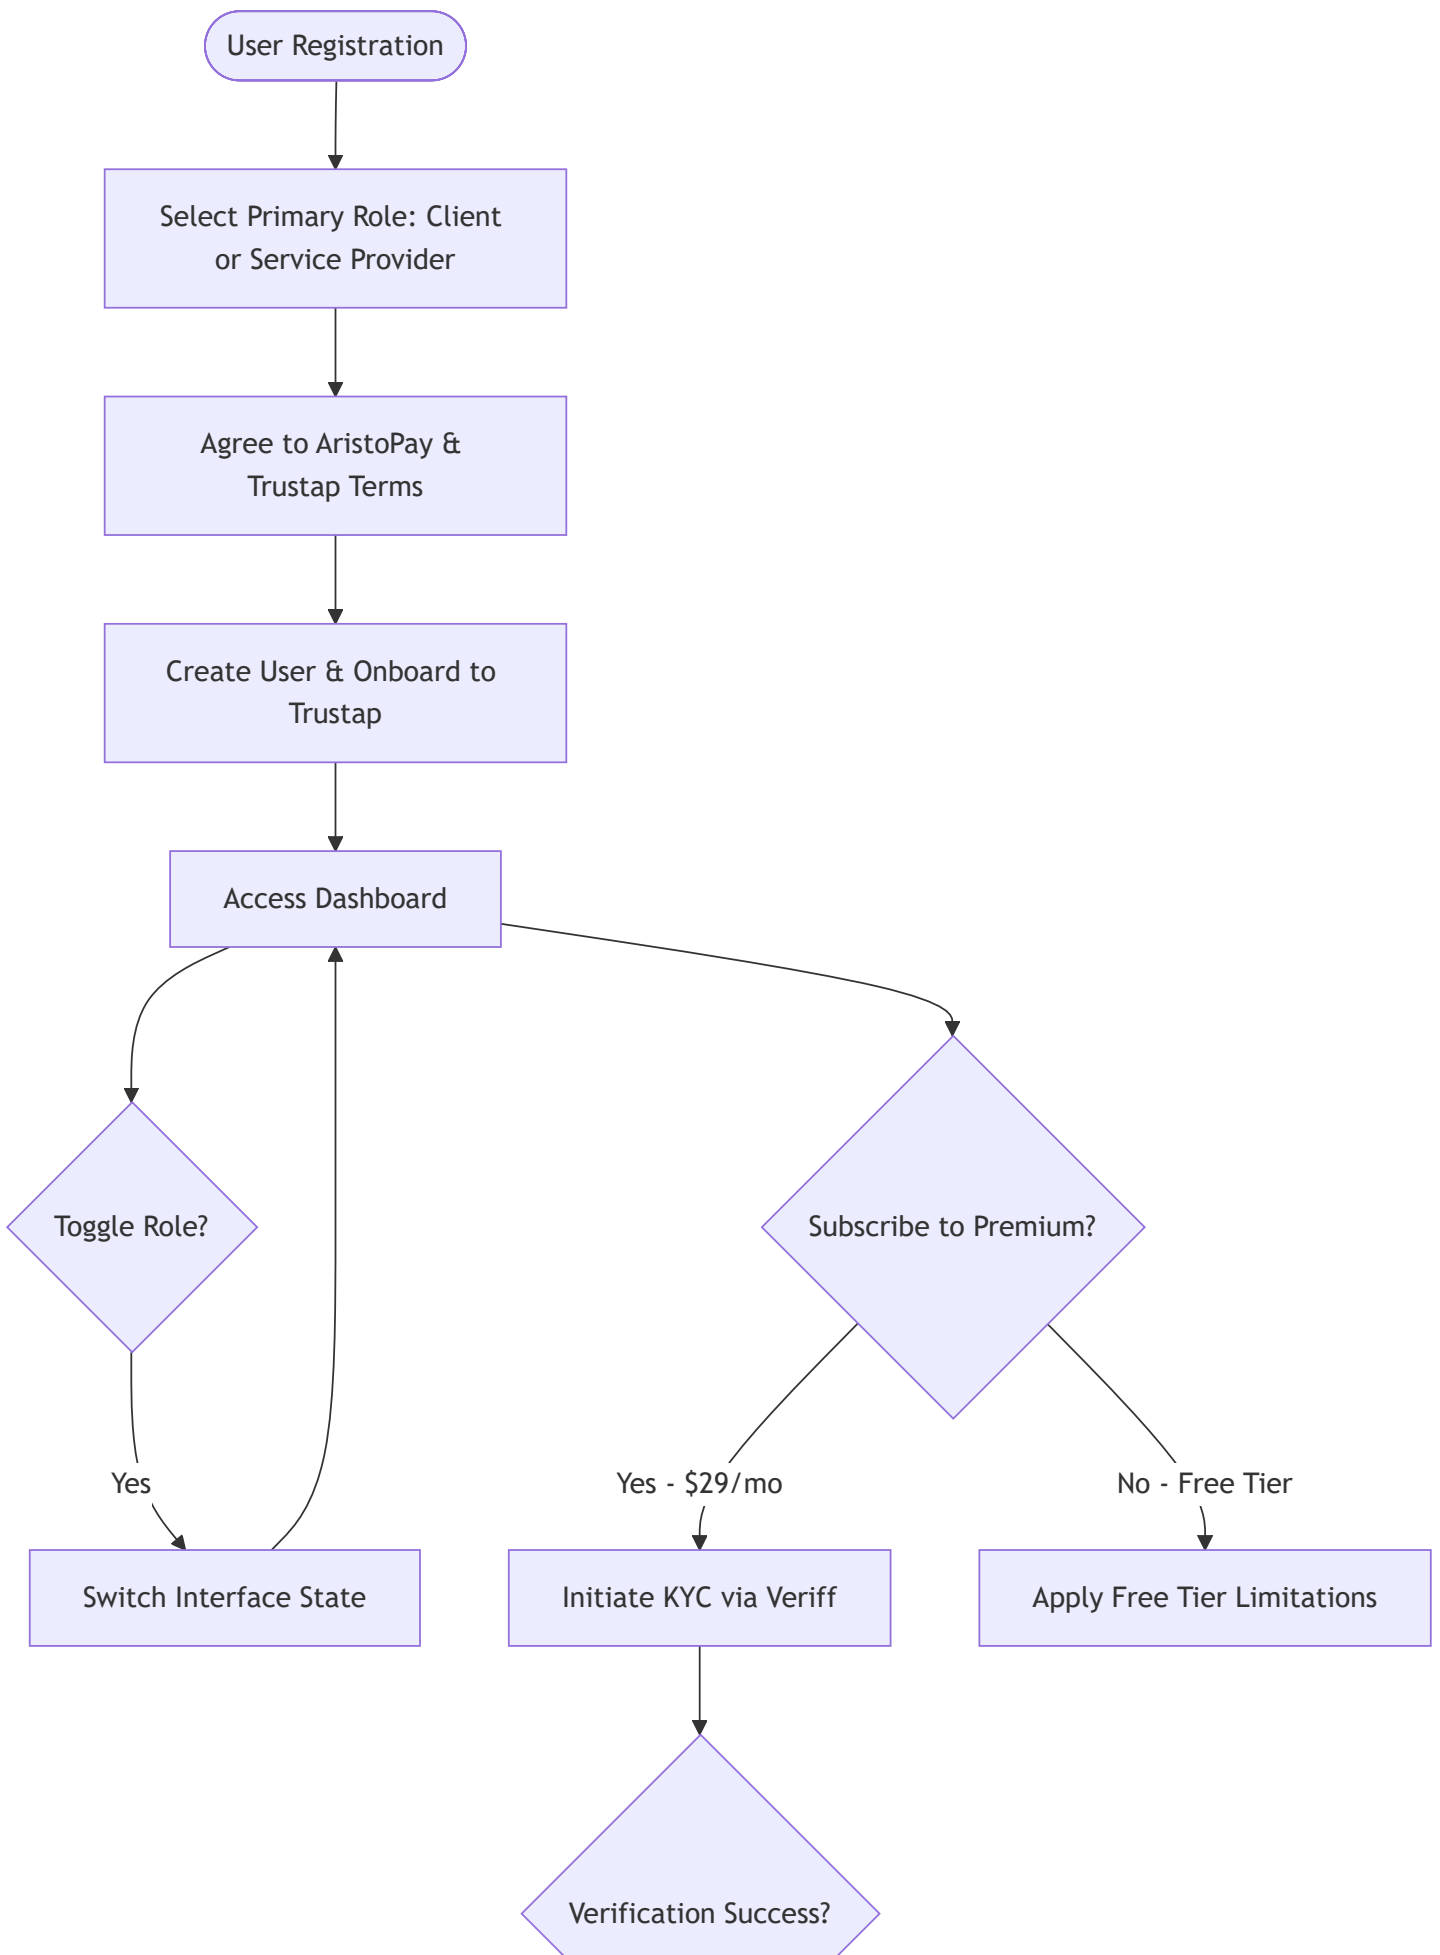

1. High-Level System Architecture

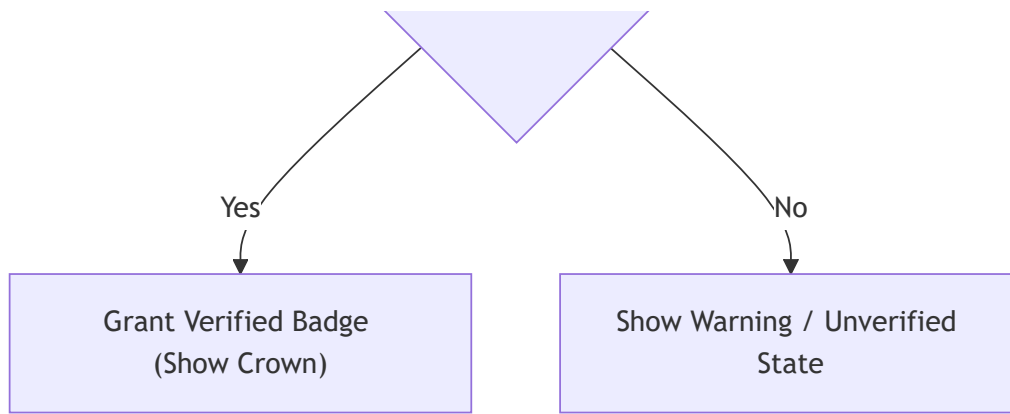

The following block diagram illustrates the component architecture of AristoPay, including the frontend, API gateway, backend server, database, and external third-party integrations (Trustap, Veriff, DocuSign, Firebase).

2. User Onboarding & Role Management Flow

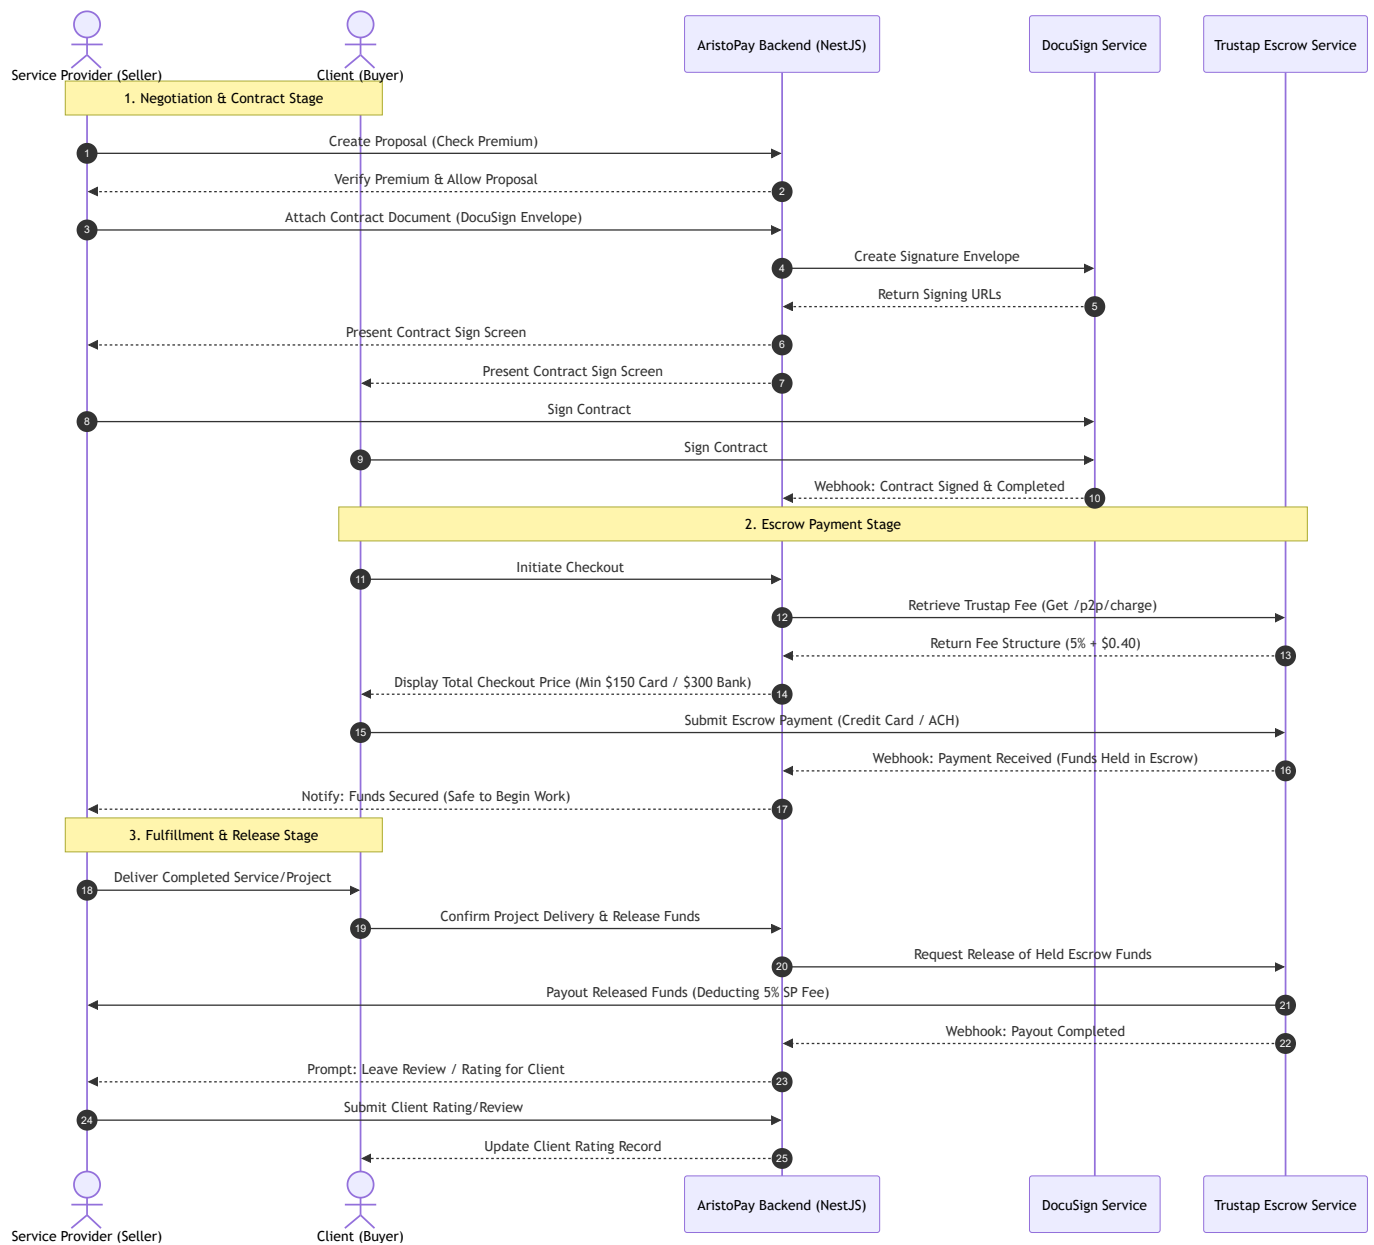

Users sign up once and can freely toggle between Client and Service Provider roles. Verification is offloaded to Veriff for premium users.

3. End-to-End Escrow Transaction & Contract Lifecycle

This sequence diagram details the transactional steps from contract initialization (DocuSign) to payment holding (Trustap Escrow), delivery, fund release, and feedback submission.

4. Feature Gating Rules Summary

The backend enforces strict access policies based on the user's subscription state:
