

Termly Third-Party Disclosure Guide

Verified Code-Level Answers for Privacy Policy & Terms Generation

Platform: AristoPay (Duenkelsbuehler)	Purpose: Termly Third-Party Questionnaire	Audit Scope: Frontend & Backend Codebases
Date: September 2026		

Core Data Disclosure Principles (Executive Summary)

- **Zero Data Selling & Zero Targeted Advertising:** AristoPay does not sell, rent, or trade personal information with data brokers, ad networks, or behavioral retargeting platforms.
- **Strictly Operational Disclosures:** User data is disclosed strictly to trusted third-party service processors required to fulfill core escrow marketplace functionality, digital contract signing, identity verification, and subscription billing.

Step-by-Step Questionnaire Breakdown (Exact Termly Order)

1. Advertising, Direct Marketing, & Lead Generation

Leave Blank / None (N/A)

Examples: Bing Ads, Chitika, Google AdSense

Technical Justification:

- Zero advertising networks, marketing tracking scripts, or lead generation pixels are implemented anywhere in the frontend or backend codebase.
- User personal information is never exposed to ad exchanges or marketing platforms.

2. Affiliate Marketing Programs

Leave Blank / None (N/A)

Examples: Amazon Affiliation, eBay Partner Network, iTunes Affiliation

Technical Justification:

- No affiliate tracking programs, referral cookie trackers, or partner affiliate networks are integrated into the application.

3. AI Platforms

Leave Blank / None (N/A)

Examples: OpenAI, Google Cloud AI, Microsoft Azure AI

Technical Justification:

- The platform operates strictly on deterministic business logic and custom APIs.
- A complete scan for OpenAI, Anthropic, Claude, Gemini, or external LLM/AI SDKs returned 0 results. No user data or documents are sent to AI services.

4. Allow Users to Connect to Their Third-Party Accounts

Select: Google account, Apple account

Examples: Facebook account, Google account, Instagram account

Technical Justification:

- Users can connect and authenticate via their Google or Apple accounts using Firebase Authentication (`src/lib/firebase.ts` & `src/main/auth/auth.service.ts`).
- Only basic identity claims (Name, Email, Google Profile Picture) are retrieved during authentication to create and populate user profiles.

5. Cloud Computing Services

Select: Google Cloud Platform (Firebase)

Examples: Microsoft Azure, Google Cloud Platform, Amazon Web Services (AWS)

Technical Justification:

- Firebase services run under Google Cloud Platform infrastructure for token verification and authentication endpoints.
- (Note: If your production PostgreSQL database and backend containers are hosted on AWS or another cloud host, select AWS as well).

6. Communicate & Chat with Users

Leave Blank (Internal Socket.io)

Examples: Customerly, Facebook Customer Chat, LiveChat

Technical Justification:

- Real-time client-to-freelancer messaging is powered entirely by the proprietary in-app WebSocket engine (`Socket.io`) with chat logs stored in the private PostgreSQL database.
- No third-party chat widgets (e.g. Zendesk, Intercom, LiveChat) have access to user messages. Transactional email communications are handled via SMTP (detailed under Custom Services).

7. Content Optimization

Select: Google Fonts

Examples: Google Site Search, TripAdvisor widget, YouTube video embed

Technical Justification:

- The application loads and optimizes typography assets (`Work_Sans` , `Rozha_One`) via Google Fonts (`src/app/layout.tsx`).
- No external video embeds, site search widgets, or third-party content optimization iframes exist.

8. Data Backup & Security

Leave Blank / None (N/A)

Examples: Dropbox Backup, Google Drive Backup, Vaultpress

Technical Justification:

- Database backups and snapshots are managed directly on the internal server infrastructure level.
- No consumer cloud storage tools (Dropbox, Google Drive) have access to user data.

9. Functionality & Infrastructure Optimization

Select: Firebase, Termly.io

Examples: Cloud Firestore, Firebase Legacy, Termly.io

Technical Justification:

- **Firebase:** Used for client-side authentication token generation and secure session dispatching.
- **Termly.io:** Used for hosting, embedding, and maintaining policy terms and cookie consent compliance.

10. Invoicing & Billing

Select: Stripe (+ Trustap in Custom)

Examples: Apple Pay, PayPal, Stripe

Technical Justification:

- **Stripe:** Processes recurring subscription billing for `AristoAccess+` plans via Stripe Checkout sessions and recurring webhooks (`src/main/subscriptions/`).
- **Trustap:** Powers milestone-based escrow payments and fund holding (`src/main/trustap-transaction/`). (Must be added under Custom Services at the bottom).

11. Retargeting Platforms

Leave Blank / None (N/A)

Examples: AdRoll, Facebook Custom Audience, Google Ads Remarketing

Technical Justification:

- No retargeting pixels, Facebook Pixels, or Google Remarketing tags are installed.
- User browsing activity is never tracked across external sites for marketing purposes.

12. Social Media Sharing & Advertising

Leave Blank / None (N/A)

Examples: Facebook advertising, Google+ social plugins, Reddit plugins

Technical Justification:

- No social media share widgets, embedded like buttons, or social network telemetry scripts are present.

13. User Account Registration & Authentication

Select: Google Sign-In, Apple Sign-In

Examples: Facebook Login, GitHub OAuth, Google Sign-In

Technical Justification:

- The platform supports Google OAuth and Apple OAuth via Firebase ID Token validation (`src/main/auth/auth.controller.ts`), alongside standard secure email/password OTP verification.

14. User Commenting & Forums

Leave Blank / None (N/A)

Examples: Disqus, Facebook Comments, Muut

Technical Justification:

- Project reviews, ratings, and feedback are handled by the platform's internal rating system. No public third-party commenting frameworks are integrated.

15. Web & Mobile Analytics

Leave Blank / None (N/A)

Examples: Crazy Egg, Google Analytics, Heap Analytics

Technical Justification:

- The codebase contains **zero** analytics trackers (no Google Analytics / gtag.js, Mixpanel, Hotjar, or Heap).

16. Website Hosting

Leave Blank / Custom Host

Examples: Shopify, Tumblr, WordPress.com

Technical Justification:

- AristoPay is a custom full-stack application built with Next.js (frontend) and NestJS (backend), not hosted on templated CMS platforms like Shopify or WordPress.

17. Website Performance Monitoring

Leave Blank / None (N/A)

Examples: Crashlytics, Firebase Crash Reporting, Sentry

Technical Justification:

- Error monitoring is currently handled via internal server loggers without streaming user diagnostic traces to third-party telemetry services.

18. Website Testing

Leave Blank / None (N/A)

Examples: Google Play Console, Optimizely, TestFlight

Technical Justification:

- No live A/B experimentation or user recording SDKs are active.

Crucial Custom Services to Add (Under "Other / + Add More")

Because AristoPay is an Escrow & Legal Contract platform, several core integrations do not appear in generic dropdown menus. **These 4 entries must be added using the + Add More button at the bottom of the Termly page:**

Purpose Field	Service Name	Detailed Reason & Data Disclosed
Identity Verification & KYC	Veriff	• Why: Verifies government-issued ID documents and facial biometric selfies for Service Providers and Clients to satisfy AML/KYC legal standards. • Data Disclosed: ID documents, biometric photos, legal name, and verification status (<code>src/main/verif/</code>).
Escrow Payment Processing	Trustap	• Why: Holds milestone funds securely in escrow until deliverables are inspected and approved. • Data Disclosed: User email, guest user ID, transaction amounts, currency, and milestone release states (<code>src/main/trustap-transaction/</code>).
Digital Contracts & E-Signatures	DocuSign	• Why: Generates legally binding contracts and collects cryptographic digital signatures between parties. • Data Disclosed: Signer full names, email addresses, contract terms, digital signature timestamps, and executed contract PDF archives (<code>src/main/docusign_2.0/</code>).
Transactional Email Delivery	SMTP / Nodemailer	• Why: Delivers critical system transactional notices (OTP verification codes, password resets, deal status alerts, and payment receipts). • Data Disclosed: User email address, first name, and notification message content (<code>src/common/config/mail/</code>).

Quick-Action Summary Table for Termly Setup

Use this consolidated master table for quick, direct input while filling out the Termly questionnaire:

Termly Purpose Group	Status / Action	Value to Enter
Advertising, Direct Marketing	 Skip / Leave Blank	None
Affiliate Marketing	 Skip / Leave Blank	None
AI Platforms	 Skip / Leave Blank	None
Third-Party Account Connections	 Select	Google account, Apple account
Cloud Computing Services	 Select	Google Cloud Platform (Firebase)
Communicate & Chat	 Skip (Dropdown)	Handled via internal Socket.io & SMTP
Content Optimization	 Select	Google Fonts
Data Backup & Security	 Skip / Leave Blank	None
Functionality & Infrastructure	 Select	Firebase, Termly.io
Invoicing & Billing	 Select & Add	Stripe (Dropdown) + Trustap (Custom)
Retargeting Platforms	 Skip / Leave Blank	None
Social Media Sharing	 Skip / Leave Blank	None
User Registration & Auth	 Select	Google Sign-In, Apple Sign-In
User Commenting & Forums	 Skip / Leave Blank	None
Web & Mobile Analytics	 Skip / Leave Blank	None
Website Hosting	 Skip / Custom	Custom Next.js / NestJS Cloud VPS
Website Performance Monitoring	 Skip / Leave Blank	None
Website Testing	 Skip / Leave Blank	None
Custom 1 (+ Add More)	 Add Custom	Purpose: Identity Verification & KYC Service: Veriff
Custom 2 (+ Add More)	 Add Custom	Purpose: Escrow Payment Processing Service: Trustap

Termly Purpose Group	Status / Action	Value to Enter
Custom 3 (+ Add More)	+ Add Custom	Purpose: Digital Contracts & Signatures Service: DocuSign
Custom 4 (+ Add More)	+ Add Custom	Purpose: Transactional Email Delivery Service: SMTP / Nodemailer

 Formal Compliance Statement for Legal Counsel:

"AristoPay collects and discloses personal data solely to authorized service processors to perform its core marketplace and escrow contract duties (Firebase for authentication, Veriff for KYC identity verification, Trustap for escrow fund holding, DocuSign for contract execution, Stripe for subscriptions, and SMTP for security notifications). No personal data is sold, rented, or shared with third-party advertising or analytics networks."
